

ANNUAL MINING REPORT 2023-24

Mahanadi Coalfields Limited - Talcher Area
Report Reference: MCL/TAL/2023-24/MR/009

1. MINE DETAILS

Mine Name:	Talcher Opencast Mine
Location:	Angul, Odisha, India
District:	Angul
State:	Odisha
Company:	Mahanadi Coalfields Limited (MCL)
Mineral:	Non-Coking Coal
Mining Method:	Opencast
Report Period:	FY 2023-24 (April 2023 to March 2024)
Date of Report:	30-05-2024

2. PRODUCTION SUMMARY

- Total coal extracted during FY 2023-24: 38.4 million tonnes
- Overburden removed: 47.9 million cubic metres
- Stripping ratio: 1.25 cubic metres per tonne
- Grade band: G11 to G13

3. GEOLOGICAL FINDINGS

The Talcher coalfield is characterised by thick, gently dipping seams that lend themselves to large-scale opencast working. Drilling during the year was concentrated in the north-western block, where nine boreholes established seam continuity beneath the Brahmani alluvium.

Overburden consists predominantly of unconsolidated sandstone and shale with an average thickness of 62 metres. Slope stability monitoring was extended to the full length of the western dump following minor tension cracking observed in September 2023.

4. RESERVE POSITION

- Proved reserves: 512 million tonnes
- Indicated reserves: 190 million tonnes
- Estimated mine life at current rate of extraction: 18 years

ANNUAL MINING REPORT 2023-24

Report Reference: MCL/TAL/2023-24/MR/009

5. ENVIRONMENTAL COMPLIANCE

- Ambient air quality monitored continuously at four stations; PM10 within NAAQS limits.
- Mine water treated and recycled for dust suppression and washery make-up.
- Plantation of 42 hectares completed during the year under the progressive mine closure plan.
- Quarterly returns filed with the State Pollution Control Board without adverse observation.

6. SAFETY

- Zero fatalities recorded during the reporting period.
- All statutory inspections completed as per DGMS circulars.
- Reportable injury rate of 0.11 per lakh tonnes, against a corporate target of 0.20.

7. RECOMMENDATIONS

- Continue exploratory drilling in the eastern block to firm up inferred reserves.
- Commission the second conveyor to reduce road haulage and diesel consumption.
- Review the overburden dump slope design ahead of the monsoon.
